“devil is on my shoulder”

UI/UX designer and developer.
Interfaces, trading tools, apps and strange websites.

three years of making interfaces people actually use.

I've worked in UI/UX for over three years, taking interfaces from the first sketch to something people use every day.

I worked on the MMSD West High app, the iOS app for Madison West High School.

Beyond that I build my own products end to end: a paper-trading terminal, an iOS nutrition tracker, a prediction-market bot, websites for clients, and a few experiments, like a snowbound Soviet block built from my love of Russian music. This portfolio is also a website: a 3D room with an old computer whose screen is the whole site.

travauxus@

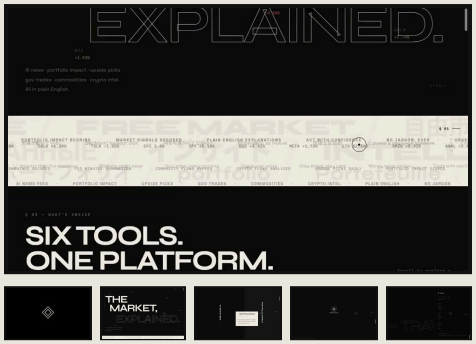

Solana memecoin paper-trading terminal · 2026

Practise on the real market before risking a cent.

— Live from the bonding curve: 1-second candles, tape and rug flags

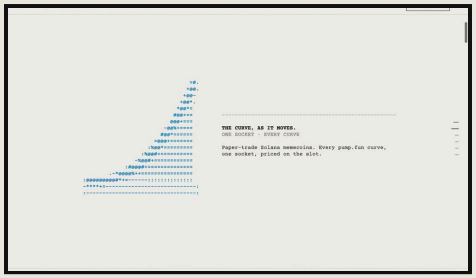

— Paper money: trade the curve with nothing at risk

— Landing page rebuilt 16 times between May and October

01 02 03 04 05

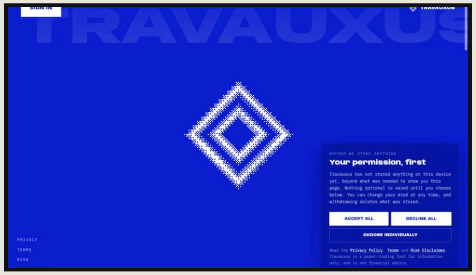

may 29 · squish cards

01 02 03 04 05

oct 15 · ascii terminal

01 02 03 04 05

oct 19 · opening in the page

01 02 03 04 05

oct 25 · dither stage

why

I love building web3 apps. Travauxus started as the trading tool I wanted to exist: somewhere to learn the memecoin market without losing money doing it.

who

Me first, and the other traders using the platform at the same time: everyone watching the same live market, on paper, together.

what

A design style taken from old video games and vintage film: dithered pixels, terminal type, grain. Every animation was tuned for fluidity, so live data moves smoothly instead of jumping.

project 02 · ios app

vitalis@

iOS · SwiftUI · Liquid Glass · 2026

Track what you actually eat, down to the micronutrient, without the app feeling like homework.

— Snap a photo or scan a barcode; every food is matched to USDA data

— Calorie ring, water and Apple Watch daylight on Home

— Full vitamin and mineral breakdown with 7-day trends

— Map of nearby butchers, farms and raw-food suppliers

Code · github.com/OmSilwaaal/primal

frames 01–05 · loop

monochrome design, branded with the algiz rune from the app icon

why

Most nutrition apps stop at calories and feel like homework. I wanted one that shows every vitamin and mineral you hit or miss, and makes logging take seconds.

who

People eating whole and raw foods who care what is actually in their food: the ones buying from butchers and farms, not just counting calories.

what

Monochrome Liquid Glass on iOS, the calorie ring as the centre of Home, and the Algiz rune from the app icon used as the brand mark wherever there is space for it.

project 03 · brand & web

a5 consulting@

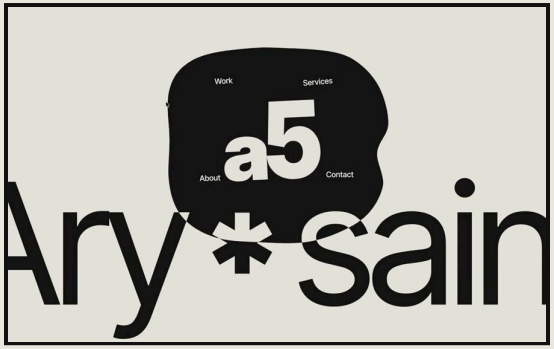

Brand identity · website + business card · 2026

A consultancy should look as considered as the software it sells.

— Website and print card for a5 Consulting

— Blob navigation, oversized type, a matching card

— Services: AI & automation, custom software, systems integration

website

business card, front

01 02 03 04 05

website intro · frames 01–05

why

A business brand created from scratch: one identity that carries from the website to the card in your hand, so the company reads as one thing.

who

Ari (Aryaman Saini), CEO of a5 Consulting, and the businesses he pitches AI and custom software to.

what

The design prompt was ink and newspapers: heavy black type pressed onto paper stock, editorial layout, oversized headlines and print texture, carried from the card to every page of the site.

project 04 · python · ml

tennisbot@

Kalshi tennis prediction & trading · 2026

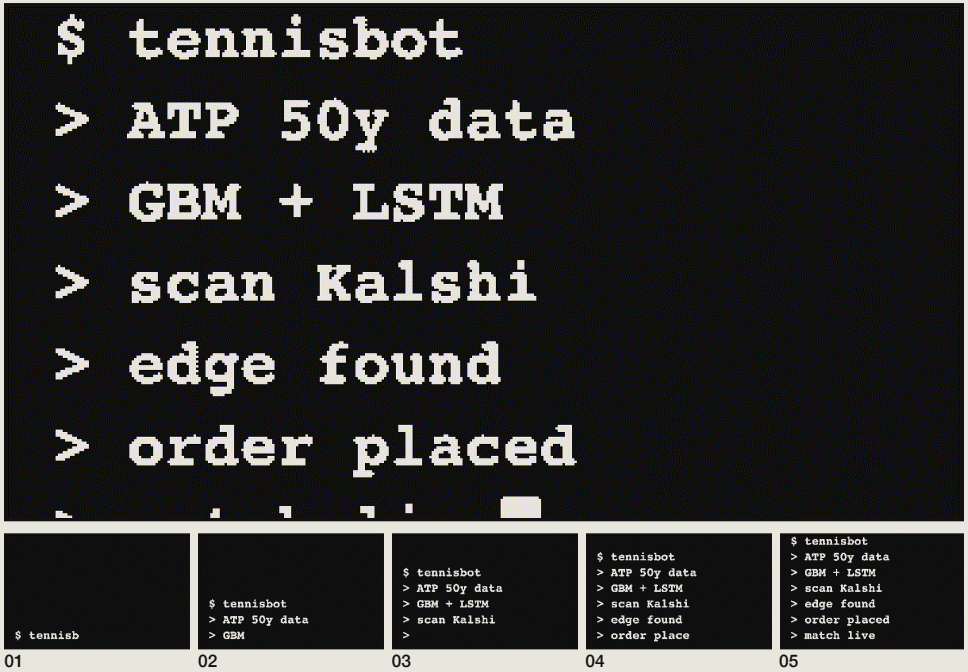

Prediction markets misprice tennis, and a model can act on the gap faster than a person.

— Gradient boosting + LSTM, trained on 50+ years of ATP results

— Finds edges against market-implied probabilities

— Places and manages positions live while matches play

github.com/OmSilwaaal/TennisBot77

frames 01–05 · loop

why

To see whether a model trained on decades of results could beat the crowd's odds on prediction markets.

who

Me: it trades my own account, so every decision it makes is one I have to stand behind.

what

A hybrid machine-learning model and an autonomous trading loop: discover markets, price the match, compare to the market, size the position, manage it live.

project 05 · personal site

om@

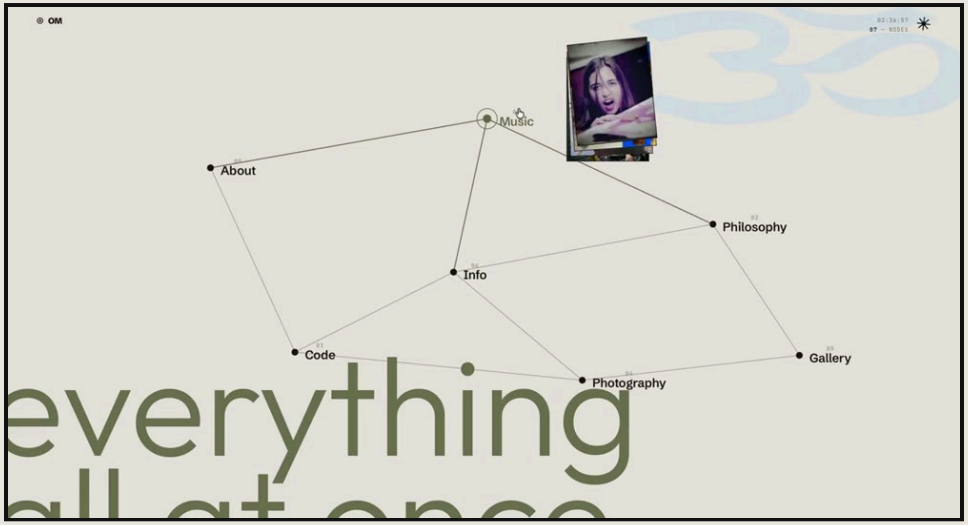

A constellation, not a menu · 2026

Everything at once, nothing hidden behind navigation.

— Seven nodes: About, Music, Philosophy, Info, Code, Photography, Gallery

— Photos surface as you move across the map

om-projkect.vercel.app

01 02 03 04 05

frames 01–05 · loop

why

A personal space for everything I'm into, not just work: music, philosophy, photography and code side by side.

who

Anyone who wants to know me beyond a CV: friends, collaborators and people finding me online.

what

A constellation of linked nodes instead of a menu, with photos that surface as you explore, so the whole of me is visible at once.

project 06 · web parody

ket-ovrdse.com@

The Y2K internet, on purpose · 2026

The early internet was loud, hostile and funny. This is that.

— Fake virus alerts and mail scanners

— CLAIM NOW pop-ups that multiply

— A Y2K desktop parody in the browser

newthing-five.vercel.app

01 02 03 04 05

frames 01–05 · loop

why

For fun, and out of nostalgia for how chaotic the web used to be before everything looked the same.

who

Friends, and anyone who remembers, or never saw, the pop-up era.

what

A faithful Y2K desktop: Windows-style dialogs, fake alerts and spam pop-ups that pile up the more you click.

pusto@

WebGL · PS1 style · 2026

Some music sounds like a place. This is the place Russian music sounds like to me.

— A low-poly Soviet panel block at night, built in WebGL

— One warm window lit; ПУСТО (“empty”) painted down the facade

— Pixelated render, fog and heavy snowfall

01 02 03 04 05

frames 01–05 · on the site it plays with its music

why

My obsession with Russian music. I wanted to build the place it sounds like: cold, concrete and empty, with one window still warm.

who

Me, and anyone who listens to that music and knows the feeling it leaves behind.

what

A PS1-style scene: a low-poly panel block in falling snow, pixelated and fogged, with ПУСТО down the side of the building, scored by the music itself.

my card@

Personal business card · graphic design · 2026

A card for myself should look like my work, not like a template.

— Oversized @Om Silwal, set tight enough to overlap

— 1-bit dithered crows: one in flight, one portrait

— Crosses as the only ornament

— Contact, LinkedIn and a QR code on the back

front

back

why

Every client card I made said something about them. I wanted one that says what I do before anyone reads a word.

who

Me, and the people I hand it to: clients, collaborators, anyone who might need a designer.

what

Heavy grotesque type crushed together, black ink on white, dithered crows and nothing else, the same print language as the a5 card turned on myself.
